

AMENDMENTS TO THE CLAIMS

Please amend Claims 2-4, 8-10, and 26-28, as follows.

Please cancel, without prejudice, Claims 1, 14, and 19-25.

Please add new Claims 31-37, as follows.

Claim 1. (Cancelled, without prejudice)

sub
Claim 2. (Currently Amended) The method of Claim 3 [[1]] further comprising the steps of:

C2
[[f)] h) determining the entitlement status corresponding to said user identifier with respect to said set of information.

Claim 3. (Currently Amended) A method of providing access to information comprising the steps of:

a) receiving a call from an application program, said call specifying a user identifier and a requested set of information of a plurality of sets of information;

b) in response to said call, determining the location of said requested information corresponding to said user identifier by:

b1) determining a plurality of fields associated with said requested set of information, wherein said fields describe information distributed over a plurality of databases; and

b2) accessing a stored mapping of said fields to said databases;

c) using said user identifier, retrieving information corresponding to a first of said plurality of fields from a first of said plurality of databases;

d) using said user identifier, retrieving information corresponding to a second of said plurality of fields from a second of said plurality of databases;

e) providing said set of information to said application program, retrieved from said first and second databases;

~~The method of Claim 1 further comprising the steps of:~~

~~f) storing in a cache [[a)] said set of information which was requested by said application program; and~~

g) if a pre-determined time has passed since said set of information was accessed, removing said set of information from said cache.

Claim 4. (Currently Amended) The method of Claim 3 [[1]] further comprising the step of:

C² [[f)] h) updating a first of said plurality of fields in said set of said information by writing information to a first of said plurality of databases.

Claim 5. (Original) The method of Claim 4 wherein said update is based upon responses given by a user of said application program.

Claim 6. (Original) The method of Claim 4 wherein said update is based upon monitoring activity of a user of said application program, said activity being related to said information.

Claim 7. (Currently Amended) The method of Claim 3 [[1]] wherein said databases comprise a first database with entitlement information thereon and a second database with user profile information thereon.

Claim 8. (Currently Amended) The method of Claim 3 [[1]] further comprising the steps of:

[[f)] providing a parameter to said application program that is used to track active user records; and

[[g)] receiving said parameter from said application program in order to track a user record associated with said call ~~said application program passing said parameter when requesting user profile data.~~

Claim 9. (Currently Amended) The method of Claim 3 [[1]] further comprising the step of:

[[f)] h) moving the information corresponding to a first of said plurality of fields from a first of said plurality of databases to a second of said plurality of databases.

C2 sub 17
Claim 10. (Currently Amended) A computer readable medium having stored thereon program instructions for providing access to information stored on a plurality of databases:

said program operable to logically map a plurality of fields of said information into a plurality of logical collections of said information, wherein at least one said logical collections comprise a plurality of said fields of said information;

said program further operable to process requests from an application program, said requests identifying a first of said plurality of logical collections of said information and a first of a plurality of users;

said program further operable to physically map said plurality of fields of said information to said plurality of databases, wherein said program is operable to determine which of said plurality of databases contain at least a first of said plurality of fields of said information corresponding to said first of said plurality of logical collections of said information for said first of said plurality of users; and

said program further operable to retrieve said information from at least two of said databases ~~without requiring storage on an intermediate database~~, said information corresponding to said user identified by said request from said application program; and

said program further operable to store said retrieved information and to remove said retrieved information if it has not been accessed for a pre-determined period of time.

Claim 11. (Original) The computer readable medium of Claim 10 wherein said plurality of databases comprises a first database and a second database.

Claim 12. (Original) The computer readable medium of Claim 11 wherein said first database comprises entitlement information.

Claim 13. (Original) The computer readable medium of Claim 11 wherein said second database comprises user profile information.

Claim 14. (Cancelled, without prejudice)

Sub D17 Claim 15. (Original) The computer readable medium of Claim 10 wherein said program is further operable to update said information for said first of said logical collections of said information by writing to a first of said plurality of databases.

Claim 16. (Original) The computer readable medium of Claim 10 wherein said physical mapping further maps said plurality of fields of said information to a database which is external to a system in which said computer readable medium resides.

Claim 17. (Original) The computer readable medium of Claim 10 wherein said information relates to a single user.

Claim 18. (Original) The computer readable medium of Claim 10 wherein said information comprises information pertaining to a group of users.

Claims 19-25. (Cancelled, without prejudice)

Sub D17 Claim 26. (Currently Amended) Means for providing access to information stored on a plurality of databases each having thereon a plurality of fields of information for a plurality of users, comprising:
means for logically mapping said fields of information onto a plurality of logical collections of said information, wherein at least one said logical collections comprise a plurality of said fields of said information;

means for processing requests from an application program, said requests identifying a first of said plurality of logical collections of said information and a first of said plurality of users;

means for physically mapping said plurality of fields of said information to said plurality of databases, wherein said program is operable to determine which of said plurality of databases contain said fields of said information corresponding to said first of said plurality of logical collections of said information for said first of said plurality of users;

means for retrieving said information corresponding to said fields, said information corresponding to said user identified by said request from said application program; and

~~The means of Claim 25 further comprising means for storing said requested set of information and removing said requested set of information if it has not been accessed for a pre-determined period of time.~~

Claim 27. (Currently Amended) The means of Claim [[25]] 26 further comprising means for updating said information for said first of said logical collections of said information by writing to a first of said plurality of databases.

Claim 28. (Currently Amended) The method of Claim [[1]] 3, further comprising repeating said a) – e) for application programs that are compliant with different programming languages from one other.

Claim 29. (Previously Added) The computer readable medium of Claim 10, wherein said program is further operable to process requests originating from more than one programming language.

Claim 30. (Previously Added) The computer readable medium of Claim 10, wherein said program is further operable to process requests originating from more than one computing platform.

Claim 31. (New) In a computer system having a processor coupled to a bus, a computer readable medium coupled to said bus and having stored therein a computer program that when executed by said processor causes said computer system to implement a method of providing a data repository, said method comprising:

a) receiving a call from an application program, said call specifying a user identifier and a requested set of information of a plurality of sets of information;

b) in response to said call, determining a location of said requested information corresponding to said user identifier by:

b1) determining a plurality of fields associated with said requested set of information, wherein said fields describe information distributed over said plurality of databases; and

b2) accessing a stored mapping of said fields to said databases;

c) using said user identifier, retrieving information corresponding to a first of said plurality of fields from a first of said plurality of databases;

d) using said user identifier, retrieving information corresponding to a second of said plurality of fields from a second of said plurality of databases;

e) providing said set of information to said application program;

f) storing said set of information in the data repository; and

g) if a pre-determined time has passed since said set of information was accessed, removing said set of information from said data repository.

Claim 32. (New) The computer readable medium of Claim 31 wherein said method further comprises:

h) determining the entitlement status corresponding to said user identifier with respect to said set of information.

Claim 33. (New) The computer readable medium of Claim 31 wherein said method further comprises the steps of:

h) updating a second of said plurality of fields in said set of said information by writing information to a first of said plurality of databases.

Claim 34. (New) The computer readable medium of Claim 31 wherein said requested set of information comprises information relating to a single user.

Claim 35. (New) The computer readable medium of Claim 31 wherein said requested set of information comprises information relating to a group of users.

C²
Claim 36. (New) The computer readable medium of Claim 31, wherein said method further comprises:

h) providing a parameter to said application program that is used to track active user records.

Claim 37. (New) The computer readable medium of Claim 36, wherein said a) of said method further comprises receiving said parameter from said application program, wherein a user record associated with said call is tracked.
